

Bug Report

Shopware 6 Storefront – Guest Checkout Flow

QA / Automation Tester Intern Exercise · Solution25

Bug Details

Field	Details
Bug ID	BUG-001
Title	Cart item is removed when quantity is set to 0 without confirmation or validation
Date Found	22 May 2026
Reporter	Reported by: Era Gashi
Environment	Browser: Google Chrome 124.0.6367.202 (64-bit) OS: Windows 11 Pro 23H2 URL: https://www.shopware6-demo.development-s25.com/checkout/cart Shopware: 6.x (public demo)
Severity	Medium
Priority	Medium
Component	Cart / Line Item Management

Steps to Reproduce

Step	Action
1	Navigate to https://www.shopware6-demo.development-s25.com/
2	Open any available demo product from the storefront
3	Open the product detail page and click 'Add to cart'
4	Open the cart page (/checkout/cart)
5	Locate the quantity input field for the added product
6	Clear the quantity field and type '0'

7	Click outside the input or press Tab/Enter to confirm the change
8	Observe the cart state

Expected vs. Actual Result

Expected Result	Actual Result
A validation message is shown informing the user that quantity must be at least 1, e.g.: "Quantity cannot be 0. Please enter a value of 1 or more."	The item is immediately removed from the cart without any confirmation dialog or validation error.
The item remains in the cart. The user is not required to confirm a removal they may not have intended.	There is no feedback to the user explaining why the item disappeared. If the user typed '0' by mistake (e.g. clearing the field before typing a new value), the item is removed without warning or confirmation

Severity Justification

Severity: Medium

The bug does not prevent checkout from completing, and the cart can be restored by re-adding the product. However, it causes a poor user experience: a customer who accidentally clears the quantity field loses their cart item with no warning. In a real store environment with a larger cart, this could lead to unintended order changes and customer support overhead.

It is classified as Medium rather than High because no data is permanently lost (the product can be re-added) and checkout itself is not blocked.

Additional Notes

This behaviour was observed consistently across Chrome and Firefox on the public demo instance.

A related case: setting quantity to a very large number (e.g. 9999) produces no stock-availability warning — the system simply accepts it. This is documented as edge case TC-E03 in the manual test plan.

Recommended fix: add client-side validation on the quantity input that prevents submission of values less than 1, and show an inline error message. If removal on 0-quantity is intentional design, a confirmation dialog ('Remove this item from your cart?') should be displayed.
